TITLE : RADIATION IMAGE CONVERSION
PANEL

ABSTRACT : PROBLEM TO BE SOLVED: To obtain a radiation image conversion panel that has high resistance to flaws without degrading the quality of formed images.

SOLUTION: In the radiation image conversion panel 10, there is a phosphor layer 12 containing stimuable phosphors on a support 11 and a protective layer 13 on the layer 12, and the average surface roughness Ra of a surface 13a is $0.10 \leq Ra \leq 0.45 \mu\text{m}$. Moreover, the support 11 is transparent and the average surface roughness Ra of the reverse side of it is $0.10 \leq Ra \leq 0.45 \mu\text{m}$. The radiation image conversion panel 10 is used at least for a method for converting radiation images through the condensation of stimuable luminescent light from the reverse side of the support 11.
